

# Hospital Charges & Average Length of Stay Report

## 2006

July 2007

**2006  
Hospital Charges  
&  
Average Length of Stay  
Report**

A report on the most common reasons for hospitalization

Prepared by the Colorado Hospital Association  
as a Voluntary Effort of  
Colorado Hospitals

July 2007

This report is available for purchase from CHA:

Hard copy or searchable, printable CD-ROM	\$250.00
ASCII-formatted diskette	\$300.00

A non-printable PDF version is available on CHA's Website:

[www.cha.com](http://www.cha.com)

If you are seeking data on an APR-DRG not included in this report, a special request may be submitted to CHA. Information for one APR-DRG for up to six hospitals will be provided for the nominal fee of \$15.00. Visit our website ([www.cha.com](http://www.cha.com)) or call to request additional information.

For data on inpatient hospital quality indicators, visit [www.hospitalquality.org](http://www.hospitalquality.org).

Colorado Hospital Association

## Table of APR-DRGs

No.	Description.....	Page
45	Cerebrovascular accident (CVA) and precerebral occlusion with infarct ..... (stroke or blood clot causing blockage of blood vessels)	19
134	Pulmonary embolism .....	28
137	Major respiratory infections & inflammations .....	37
139	Other pneumonia.....	46
140	Chronic obstructive pulmonary disease (COPD) ..... (lung diseases that cause blockage, including chronic bronchitis & emphysema)	56
141	Asthma (lung condition, often allergic in nature, causing labored breathing).....	66
174	Percutaneous cardiovascular procedures with acute myocardial infarction (AMI)..... (balloon repair of a heart vessel with diagnosis of a heart attack)	74
175	Percutaneous cardiovascular procedures without acute myocardial infarction ..... (balloon repair of a heart vessel without diagnosis of a heart attack)	80
194	Heart failure .....	86
198	Angina pectoris and coronary atherosclerosis ..... (sudden spasms of chest pain due to thickening of arteries from fatty deposits)	96
201	Cardiac arrhythmia and conduction disorders (irregular heartbeat) .....	104
203	Chest pain .....	114
221	Major small and large bowel procedures ..... (colostomy, ileostomy, operations on the intestines)	123
225	Appendectomy (surgical removal of the appendix).....	131
241	Peptic ulcer and gastritis (bleeding of stomach and/or intestines, bleeding ulcer).....	139
247	Intestinal obstruction.....	148
249	Nonbacterial gastroenteritis, nausea and vomiting (severe flu).....	157
254	Other digestive system diagnoses (hernia, irritable colon).....	167
263	Laparoscopic cholecystectomy ..... (gall bladder removal through small incisions in the abdomen)	176

**Table of APR-DRGs, continued**

<b>No.</b>	<b>Description.....</b>	<b>Page</b>
301	Hip joint replacement.....	184
302	Knee joint replacement .....	192
304	Dorsal and lumbar fusion procedures, except for curvature of the back ..... (surgical repair of two or more back vertebrae by immobilization)	200
308	Hip and femur procedures for trauma, except joint replacement..... (repair of hip and upper leg bone fractures due to injury)	207
310	Intervertebral disc excision and decompression ..... (surgical repair of herniated or bulging discs by removal of disc matter)	215
313	Knee and lower leg procedures, except foot..... (repair of knee and ligaments, repair of ankle fractures)	221
347	Other back and neck disorders, fractures and injuries ..... (non-surgical treatment for back pain, sprains, and fractures of spine)	229
383	Cellulitis and other bacterial skin infections (includes abscesses).....	239
420	Diabetes.....	249
460	Renal failure (kidney failure).....	258
463	Kidney and urinary tract infections.....	267
513	Uterine and adnexa procedures for non-malignancy, except leiomyoma..... (surgery on female reproductive organs, including ovaries, fallopian tubes and uterus for non-cancers, except tumors of the smooth muscles)	277
540	Cesarean delivery (surgical delivery of a baby) .....	284
560	Vaginal delivery.....	292
640	Neonate, birth weight greater than 2499 grams, normal newborn or newborn with other problems .....	301
720	Septicemia & disseminated infections .....	309

# Colorado Hospital Association

## Mission Statement

The Colorado Hospital Association provides advocacy and leadership; fosters communication, collaboration and consensus; and provides technical assistance and information about emerging tools and trends to improve patient safety, hospital efficiency and effectiveness.

## Who We Are

The Colorado Hospital Association (CHA) represents all types of hospitals throughout Colorado: private and government-operated, metropolitan and rural, large and small, investor-owned and not-for-profit.

Our members cared for 478,273 people last year in general service, academic, rehabilitation and psychiatric hospitals. Members recorded 7,546,148 outpatient visits, including home health care and emergency room visits. With 58,156 people employed and combined payroll and benefits estimated to be \$3.8 billion, Colorado hospitals are important to the state not only as health care providers, but as major employers and significant contributors to the Colorado economy.

Policy for the Association is established by a twenty-two member Board of Trustees elected by the membership. Representatives of member hospitals and other organizations serve on councils, committees and task forces to assess needs and capabilities, participate in public policy development, identify priorities and recommend actions to the Board of Trustees.

## Data Services

Through the publication of this report on hospital charges and average length of stay, Colorado hospitals continue their commitment to helping the public better understand the health care delivery system.

This publication is based on CHA's Discharge Data program, an administrative database established in 1979. In addition to charges and average lengths of stay, inpatient quality indicators are available from the Discharge Data program at [www.hospitalquality.org](http://www.hospitalquality.org). CHA also maintains a financial database called DATABANK, the source of CHA's *Reference Guide to Colorado Hospital Financial and Utilization Data*.

# Hospital Charges and Average Length of Stay

Consumers and purchasers of health care, such as businesses, insurance, and managed care companies, seek information to compare the cost and quality of hospital care. Since 1988, Colorado hospitals have released information on the charges and length of stay for the 35 most common inpatient medical conditions and surgical procedures performed in Colorado hospitals. CHA provides hospital average charges and length of stay for procedures not included in this report. Each hospital can provide estimated charges for a person who anticipates being admitted.

Charges cannot be used to judge quality of health care. Hospital-specific inpatient quality indicators are available for eleven conditions and procedures at [www.hospitalquality.org](http://www.hospitalquality.org). Consumers can use the quality and charge information together to ask better questions and to make more informed decisions about their health care.

## *Why Charges May Vary*

Charges vary for many reasons. The following are some of the factors that affect charges.

- *Individual responses:* Outcomes and length of stay vary, even for the same diagnosis. No two patients, their health status, reactions to treatment, or time to recover are identical.
- *Unpaid care:* The number of patients whose care is not fully paid affects charges. The gap between the cost of care and payment results in those costs being “shifted” to other patients.

Medicare and Medicaid, which are government-funded programs, accounted for more than 50% of hospital days statewide in 2006. A hospital with a high number of Medicare or Medicaid patients must set charges high enough to recover the shortfall in costs not paid by these programs. Appendix C shows the percentage of Medicare and Medicaid patient days for reporting hospitals.

People with inadequate or no health care insurance who cannot afford to pay for their care also contribute to cost shifting.
- *Comparability of billing:* What is included in the charges may not be comparable. For example, Medicaid and some health insurers require hospitals to include care for both the mother and the newborn as part of delivery charges (APR-DRGs 540 and 560). Other health plans require these charges to be billed separately. Hospitals with a high percentage of patients with combined charges for mother and baby appear to have higher delivery charges. Similarly, charges for hospitals where physician fees are included will appear higher than at hospitals where they are not.
- *Individual physician judgment:* Charges for some APR-DRGs, such as vaginal delivery (560), have little variation within the minor severity level, because physicians agree on standard treatment. Other APR-DRGs have a significant range of charges, even within the minor severity level because the category includes a variety of illnesses for which treatment varies. An example is chronic obstructive pulmonary disease (140), which includes both bronchitis and emphysema. Medicine is an art as well as a science and individual physician judgment, based on education, experience and patient needs, influences treatment decisions.
- *Complexity of care:* Hospitals that offer more complex services (such as burn units or trauma care) use more resources to treat patients, so charges are higher.

## Talk to Your Doctor and Hospital!

Well-informed patients, who actively participate in their medical care, seem to do better than more passive patients. Ask questions about your diagnosis and proposed medical care; written information may be available. If the terms are too technical, ask what they mean. Clear information will help you more successfully follow your doctor's advice! This report is *one* tool to help you be a more active participant in the health care system; use it as a *guide*.

- Ask your physician which APR-DRG category might be comparable to your condition. (Many physicians will be more familiar with the standard DRG numbering system.)
- Review the number of patients treated at each hospital, the average length of stay and the average charges for each of the severity categories. Check the inpatient quality indicators ([www.hospitalquality.org](http://www.hospitalquality.org)) if they are related to your condition or proposed procedure.
- Ask your physician and hospital (start with a patient representative or admissions counselor) how your condition and health status might affect costs, procedures, and length of stay.
- Ask your insurance company what is covered under your plan and what you will be expected to pay out-of-pocket for the proposed medical care. If you are concerned about your ability to pay, talk to a financial counselor at the hospital prior to admission if possible.

Here are some questions to ask when your doctor recommends tests, surgery or other procedures:

- |   |  |
|---|--|
| • What operation, treatment, or tests are being recommended? Why?   | • How long will recovery take? How limited will activity be during recovery?   |
| • What are benefits, risks and alternatives? What could happen if it is not done?                                       | • What kind of pain will there be after surgery? How will it be managed?   |
| • How many of these cases has the hospital staff cared for or the physician treated?                                    | • What are the charges and fees? (See the section, <i>Why Charges May Vary</i> .)  |
| • Will the outcome of a test affect treatment?  | • What additional charges may be incurred? (For example, will there be a bill from a laboratory or a medical specialist to read an x-ray or other test?) Will there be other consulting specialists? |
| • How soon does an operation need to be done?   |  |
| • What are the qualifications of the surgeon, anesthesiologist or other key health care providers who will be involved? | • Will Medicare and/or other insurance cover charges? Will the physician accept the insurance payment in full? Do the physicians accept the same insurance as the hospital? (They may NOT.)          |
| • Can you receive the care as an outpatient without staying overnight in a hospital?                                    | • Is home health care an option?   |

# Diagnosis Related Groups (DRGs) and APR-DRGs: *What Are They?*

## *DRGs*

Diagnosis Related Groups, or **DRGs**, were developed for Medicare as a means of relating injuries and illnesses a hospital treats to the costs incurred by the hospital. This system groups the thousands of existing treatments and procedures into similar categories of diseases and diagnoses. Payment rates are set for specific DRGs based on what an *average* patient within a category of disease might be expected to cost the hospital to treat. The hospital is paid that rate, regardless of how ill a patient is, how long the patient stays in the hospital, or how much it cost the hospital to provide the care. DRGs have several limitations:

- The system was designed for Medicare, a program primarily for people over age 65. The resources used by other patients are not adequately addressed. DRGs do not exist for some admissions to a hospital, such as pediatric admissions.
- DRGs focus on resource intensity (the volume and type of diagnostic and therapeutic services, along with the unit where care is provided for a particular diagnosis) rather than the severity of illness (extent of the illness or disease) or risk of mortality (likelihood of dying).
- DRGs do not recognize the impact of secondary diagnoses of the patient. For example, all patients with “chronic obstructive lung disease” are considered equal. DRGs do not take into account risks due to age or other conditions, such as high blood pressure or diabetes.

## *APR-DRGs*

Substantial work has been done over the years to develop a system that reflects information about the severity of illness of each hospital’s patients. One of these systems is the All Patient Refined-Diagnosis Related Groups, or **APR-DRGs**, developed by 3M Health Information Systems.

The APR-DRG system was designed to:

- Compare hospitals across a wide range of resource and outcome measures
- Evaluate differences in mortality rates
- Identify opportunities for hospitals to improve quality and other internal management issues

The basic principle of APR-DRGs is that the severity of illness or risk of mortality of a patient is correlated with patients’ underlying

problems. For example, patients with extreme severity of illness or risk of mortality rankings have multiple serious diseases, such as heart failure or insulin-dependent diabetes.

APR-DRGs incorporate four levels of severity of illness (how sick a patient is) and risk of mortality (likelihood of dying), in addition to the resource intensity used by DRGs. The levels are minor, moderate, major and extreme. These are not “scores” and do not describe a hospital’s total patient population. A severity level of “major” is not equivalent for a patient with a fractured leg and a patient with heart failure.

DRGs are combined into 316 APR-DRGs that include diagnoses not used for the Medicare population, such as pediatric diagnoses.

# How to Read This Report

This report provides information about hospital inpatient charges and length of stay for calendar year 2006. Physician charges and outpatient surgery charges are not included. The following descriptions and definitions will help readers understand the data pages.

**APR-DRG NUMBER and NAME:** In the top left-hand corner of each page is the APR-DRG number and name. The data are presented in numerical order using the APR-DRG number. A list of the 35 APR-DRGs in this report is on pages 15–16. These 35 APR-DRGs accounted for more than 54% of the discharges from 71 acute care hospitals in Colorado in 2006.

A ranking of the number of patients admitted to Colorado hospitals by APR-DRG is in Appendix A.

Beginning with 2004 data, Version 20 of 3M's APR-DRGs was used for analysis. Version 20 superseded version 15. APR-DRGs were refined; some were combined, reducing the number of APR-DRGs from 355 to 316. Others were split into other APR-DRGs. For example, Asthma (141) was previously part of Chronic Obstructive Pulmonary Disease (140). Therefore, not all information prior to 2004 can be compared to more recent data.

**MDC:** 305 APR-DRGs combine into 25 Major Diagnostic Categories (MDCs). 11 APR-DRGs are not grouped. Appendix B shows data by MDC. The list of the 35 APR-DRGs included in this report (pages 15-16) shows the corresponding MDC.

**PEER GROUP:** Hospitals are grouped according to the Medicare payment method that applies to each one. They fall into four categories: Denver Metro, Other Urban, Rural, and Critical Access Hospitals. The list of Participating Hospitals (pages 13-14) includes the peer group for each hospital.

**HOSPITAL NAME:** Colorado's acute care hospitals are in alphabetical order within each peer group by APR-DRG. If a hospital did not treat patients in an APR-DRG, it is not listed. This report does not include rehabilitation, psychiatric, specialty or children's hospitals.

**SEVERITY:** The APR-DRG system assigns levels of severity, or how sick the patient is, by considering:

- Principal diagnosis, the main reason for admission to the hospital;
- Secondary diagnoses, underlying or complicating conditions such as diabetes or hypertension;
- Age;
- Presence of certain non-operating room procedures, such as dialysis.

The levels for severity of illness are minor, moderate, major and extreme.

***MINOR severity of illness*** is relatively without complications or secondary diagnoses that would consume additional resources.

***MODERATE, MAJOR and EXTREME*** levels each have additional factors that make the illness worse and require additional resources to provide care. These factors may be different for each illness category.

***TOT/AVG*** is the **total** number of patients treated for all severity levels and the **average** length of stay and **average** charges for all patients in that diagnosis category.

***OUTLIERS*** will be found for some hospitals under **Tot/Avg**. This is the number of patients who have an unusually short or long length of

stay compared to other patients in the same category. Exceptionally short or long lengths of stay may be due to death or transfer to another facility, a catastrophic condition, or coding or data submission errors. These exceptional values are excluded from the calculations because they distort the averages. Charges per day less than \$150 or more than \$100,000 also have been excluded.

**# of PTS:** This shows the **number of patients** in each severity level and the total number of patients treated in this APR-DRG for each category and each hospital

Each level of severity and the total must represent at least five patients or the information is suppressed because of the lack of statistical validity. A “.” is used to reflect fewer than five patients.

**LENGTH OF STAY** is shown by three numbers:

- **ALOS** is the **average length of stay** for patients in each severity level and for all patients.
- **LOW** and **HIGH** numbers reflect the statistical standardized range for length of stay. There is 95% probability the expected length of stay lies between these numbers. Standardized range is calculated separately for each hospital and each category. This

shows what is likely to happen in that hospital. **Peer Group Totals** can be used for comparisons.

**TOTAL CHARGES** are shown by three numbers:

- **AVG CHG** is the average charge for patients in each severity of illness level and for all patients. *These are hospital charges and, in most cases, do not include separate physician charges.*
- **LOW** and **HIGH** numbers reflect the statistical standardized range. There is 95% probability that the expected charges lie between these numbers for this hospital. The standardized range is calculated separately for each hospital and each category. This shows what is likely to happen in that hospital. **Peer Group Totals** can be used for comparisons.

**PEER GROUP TOTAL:** At the end of each grouping of hospitals (Denver Metro, Other Urban, Rural, and Critical Access Hospitals) is the **total** for number of patients in that group of hospitals and **peer group average** length of stay and charges.

**STATEWIDE TOTAL:** At the end of each APR-DRG category is the **total** number of patients statewide and the **statewide average** length of stay and charges.

## Appendix D

### Summary of Data Elements/Indicators for Inpatient Admissions and Outpatient Surgeries

This Appendix D summarizes demographic information about the records in the CHA Discharge Data Program database. In 2006, this database included information on 478,273 inpatients (patients who intended to stay overnight in the hospital for their care) and 373,494 outpatient surgery patients. This is the only section of the report that contains data on Outpatient Surgeries.

## Appendix E

### Standardized Range: Technical Description

The lower and upper limits of the Standardized Range were calculated as:

$$\overline{X_{ij}} \pm 1.96 \left( \frac{S_{ij}}{\sqrt{N_{ij}}} \right)$$

where

$i$	=	DRG
$j$	=	Hospital
$X$	=	Average charge or length of stay
$S$	=	Standard deviation
$N$	=	Number of discharges

The standardized range is an interval estimate of a population parameter (e.g. average charge). The 95% standardized range is a range of values for a sample statistic (e.g. sample mean) in which there is a 95% chance that the population parameter lies. That is, if a standardized range for the average charge is calculated for each of 100 random samples from a population of discharges, then 95% of these standardized ranges will contain the average charge for the entire population of discharges.

The standardized range interpretation is based on the assumption that charges are normally distributed, which is not necessarily the case for most APR-DRGs. For an APR-DRG with charges that follow a normal distribution, low and high charges are equally likely to fall outside the standardized range. That is, out of 1,000 discharges, about 25 charges (2.5%) are expected to be higher than the upper limit of the 95% standardized range, and about 25 charges are expected to be lower than the lower limit.

For APR-DRGs with charges that are typically skewed to the right (meaning that charges are more concentrated in the lower values), a greater proportion of high charges than low charges are expected to fall outside the standardized range. That is, the likelihood of charges being higher than the upper limit is more than 25 out of 1,000 discharges. The reverse is true for high-charge (skewed to the left) APR-DRGs.

## Appendix F

---

### Colorado Hospital Association (CHA) Discharge Data Program (DDP) Database

---

---

#### What is the CHA Discharge Data Program Database?

The CHA DDP database consists of medical record information from all patients discharged from Colorado hospitals and patients who have hospital-based outpatient surgery. Beginning with 1988, the discharge data comes from all general hospitals, two psychiatric hospitals and four rehabilitation hospitals. The 2006 database (most current full year) consists of 478,273 inpatient records and 373,494 outpatient surgery records. There are up to 32 different data elements (depending on the reporting year) recorded for each patient record. The principal data fields are listed below.

##### Demographics

- Age in years
- Sex
- Race (if reported)
- Place of Residence
- Expected source of payment
- Zip Code
- County (if reported)

##### Diagnosis and Procedures

- ICD-9-CM Diagnosis Codes (up to 15)
- ICD-9-CM Procedure Codes (up to 15)
- CPT-4 Procedure Codes (if reported)
- Day of Principal Procedure
- Birth Weight (1993 on, if reported)
- CMS DRGs
- CMS MDCs
- 3M APR-DRG Severity Level
- 3M APR-DRG Mortality Level
- Days on mechanical ventilator (1993 on)
- External Cause of Injury Code (E-Codes)

##### Duration of Stay and Admission/Discharge Status

- Admission Date
- Admission Day of the Week
- Length of Stay
- Admission Source
- Discharge Date
- Discharge Day of the Week
- Discharge Status

##### Total Charge and Charge Components

- Total Charge (Sum of all revenue codes)
- Laboratory Charge (UB-92 code 300-319)
- Pharmacy Charge (UB-92 code 250-259)
- All Other Charges
- Radiology Charge (UB-92 code 320-359 400-409, 610-619)
- Routine Charge (UB-92 code 100-239)

---

#### What questions can be answered with DDP data?

Data can be aggregated into many different categories, including hospital, DRG, severity level, payer type, age group or zip code. The data also can be used to create computed variables such as average length of stay, average charges or median age. These data categories and data elements can be used for patient origin studies, market share analysis, contract negotiations, charge report comparisons, understanding competitors, disease-specific volume reports, understanding health care capacity in response to local community needs, crude and severity adjusted death rate analysis, length of stay analysis, and patient access analysis. The inpatient quality indicators at [www.hospitalquality.org](http://www.hospitalquality.org) are also derived from this data.

---

## Who uses DDP data?

Hospitals, researchers, government agencies, insurance companies, businesses, consumers and the media use discharge data. Blinded patient level data can only be used for public health, research or health care operations as defined in 45 C.F.R., Parts 160 and 164 (the HIPAA Privacy Regulations).

---

## How are DDP data obtained from CHA?

CHA member hospitals receive a series of **standard quarterly reports** based on discharge data as a part of membership services. **Specialized requests** from members and non-members are available as hard copy or an electronic file for a fee. CHA staff will write a software program to produce the desired tabulation as a printout, on an Excel spreadsheet file or in an ASCII file. **All blinded patient records** are available on CD-ROM in a 512-character layout.

---

## What is the price?

The minimum fee is \$225. Fees are based on the number of records and the time required for data abstraction. For further price details please contact Curtis Sandlin at CHA (720) 489-1630, ext 63, or [curtis.sandlin@cha.com](mailto:curtis.sandlin@cha.com). CHA will ask you to fill out an ad hoc request form and will provide a price quote before proceeding with the data request. The form in a PDF format can be found on the CHA Web site, <http://www.cha.com> under the “Data” button, and then the “Discharge Data Program” tab.

---

## What are the limitations associated with DDP data?

Identification of physicians and patients is excluded from all data extracted except to reporting hospitals and authorized state and federal agencies in accordance with applicable law. The amount the hospital is actually paid is not obtainable from this database. There are no physician fees included in the reported charges.

DDP data cannot be re-sold or distributed to other organizations without CHA approval. Any person within the requesting organization may use the released data. CD-ROM purchases are for all discharges statewide and/or for all ambulatory surgery patients. DDP data cannot be used to identify patients and physicians, or in any advertising by member hospitals or requesting organizations. Any publication or report using CHA DDP data must state that the source of data is the CHA Discharge Data Program. Hospitals are responsible for the accuracy of the data.

---

## What is done to ensure accuracy?

CHA reviews the DDP data by monitoring for timeliness, accuracy and completeness. Data from hospitals are processed through computer edit routines that flag records with missing or erroneous data. The flagged records are returned to hospitals for review and correction. Corrected records are returned to CHA for data entry and re-editing. Verification reports are generated for hospitals to validate the number of patients, average length of stay and average charge by DRG or principal procedure for ambulatory surgery patients. Comparisons of the data for the same time periods between two different years are analyzed. Variances between the two years of 50% or more are followed up with hospitals.

---

## FOR MORE INFORMATION

For more information on the CHA DDP database, please contact Bob Finn at CHA.  
Phone: (720) 489-1630, FAX: (720) 489-9400, e-mail: [bob.finn@cha.com](mailto:bob.finn@cha.com).
